What's New in TTE

The following updates are effective 9/21/15:

Available Receipts: Dynamic Loading of Older Receipts

Overview

Concur has updated the **Available Receipts** and **Receipt Store** sections to more efficiently handle older receipt images. Images may be up to a year old, however only the most recent eight images are displayed in **Available Receipts** and **Receipt Store**. The user will be able to scroll down to view and manage their older receipt images, with the system dynamically retrieving the receipt images in chunks. This is similar to how Facebook will fetch additional information as you continue scrolling down the news feed.

Business Purpose/ Benefit

This enhancement provides a useful method for finding older receipts while keeping the default section view focused on current images to improve performance and page load times.

## E-Receipts: Manual Matching with Trip Segments Now Available

Overview

When needed, you can manually combine your e-receipts 🔵 and trip segments ✈ if Concur's *Smart Expense Matching* functionality is not triggered automatically based on the Trip IDs and/or Segment IDs.

Business Purpose/ Benefit

This enhancement can expedite expense report submissions.

What the Employee Sees

After selecting the e-receipt and trip segment, the **Match** button enables.
